

July 12, 2017

The Sustainable Packaging Coalition (SPC) is pleased to announce the launch of our new website documenting the global recovery efforts for multi-material packaging. [The SPC Multi-Material Flexibles Packaging Recovery Website](#) seeks to document and share insights from all of the global efforts to recover multi-material packaging. Pilot projects, private-sector innovations, and industry collaborations ranging from design, collection, sortation, and processing have been collected and shared on one site. It is our hope that by centralizing data we have created a valued resource to help educate and advance global efforts to recover this rapidly growing packaging format.

This website will be the first to collate and consolidate global learnings on recovery for this multi-material flexible packaging. While there are many global initiatives regarding flexible recovery at-large, this website focuses on projects which include, or specifically address, the unique needs of multi-material packaging.

The website includes:

- Links to projects, resources, and reports
- A summary page of lessons learned
- FAQ section
- Contacts and reports

We recognize this will be a dynamic process, with new information emerging as investment and understandings grow. We intend to keep this site updated as information becomes available.

We are reaching out to you to request your assistance in promoting the website and helping us keep it updated with new projects and resources. We request your support to promote the site--please share this link with your stakeholders and/or reference it in your online resources. Additionally, if you are aware of any other global projects or initiatives to advance the recovery options for multi-material packaging please do let us know.

Please follow the link to view the website: <https://multi-materialflexiblerecovery.squarespace.com/>
